Wall-hung gas condensing boiler for heating

- Wall-hung gas condensing boiler
- Equipped to operate on natural gases and can be converted to propane
- Gas supply pressure: 20 mbar
- Forced flue or chimney connection
- **Annual operating efficiency up to 110%**
- Low pollutant emissions: NOx < 37 mg/kWh for MCA 45, 32 mg/kWh for MCA 65, 45 mg/kWh for MCA 90 and 46 mg/kWh for MCA 115
- **Monoblock heating body in aluminium/silicium**
- Gas premix burner in stainless steel with a surface in woven metallic fibres, modulating from 18 to 100% of output
- Fan with air intake silencer
- Delivered with integrated automatic air vent, run-off siphon

- **Choice of one of the following two control panels:**

- **DIEMATIC iSystem:** control panel to control and regulate up to 3 heating circuits + 1 DHW circuit, depending on optional equipment connected, according to the outside temperature. It can also be used to optimise management of combined control system associated with boilers with IniControl (even DIEMATIC iSystem) and control cascades of 2 to 10 boilers.

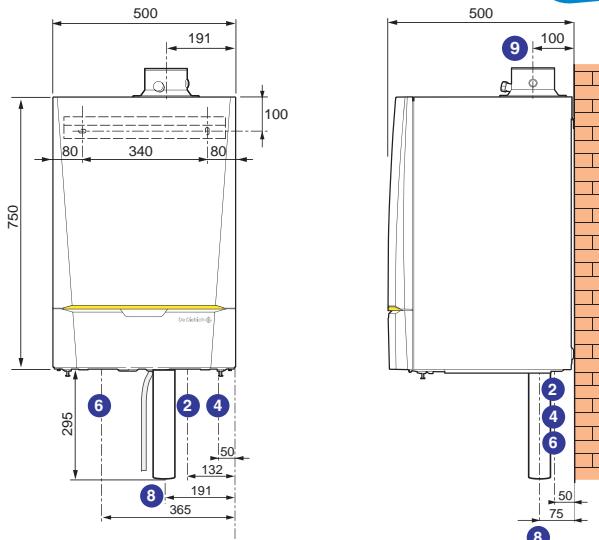

- **iniControl:** for operation either according to outside temperature (sensor optional), or through the 0-10 V contact fitted to this panel as standard. It can also be used as a secondary boiler as part of a cascade installation controlled by a boiler with the DIEMATIC iSystem control panel or in a cascade system in which each boiler is controlled in 0-10 V. (see page 4).

NB: These boilers have been designed, tested and certified with the flue systems offered in our catalogue, pursuant to the requirements of standard EN 483 covering central heating boilers using gaseous fuels.

We guarantee the safety and correct operation of our boilers as long as they are installed with the certified flue systems under the conditions recommended in our technical documentation.

INNOVENS PRO MCA 45, 65, 90 OR 115 CASCADE SYSTEMS

Complete cascade systems for 2 to 4 MCA 45, 65, 90 or 115 boilers

MCA 45 to 115 cascade systems are available in 3 versions:

- **LW:** for wall-hung alignment of the boilers
 - **LV:** for floor-standing alignment of the boilers
 - **RG:** for back to back assembly of the boilers
- These systems include:
- the decoupling cylinder
 - the boiler connection collector including the heating flow and return connection pipes Ø 65 mm, the gas connection pipes Ø 50 mm and the flanges
 - the primary injection pumps
 - the boiler connection kits including the outlet valve, the multi-function return valve (with filling and draining valve, gate valve, non-return valve, safety valve and connection for the expansion vessel), and the gas valve
 - the wall assembly rail for LW versions or, for LV and RG versions, the corner support structures with the boiler

assembly frame

- the outlet sensor + sensor tube and the inter-boiler BUS connection cable

Nota: the boilers should be ordered separately

Options:

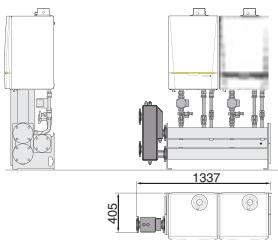

- insulating shells
- connecting flanges... (see page 3)

FLUE SYSTEMS FOR INNOVENS PRO

CLASSIFICATION

- 1 **Classification C_{13x}**: Air/flue gas connection through concentric pipes to a horizontal air/flue gas vent (so-called forced flue)
- 2 **Classification C_{33x}**: Air/flue gas connection through concentric pipes to a vertical air/flue gas vent (roof outlet)
- 3 **Classification C_{33x} (newly C_{93x})**: Air/flue gas connection using concentric pipes in the boiler room and single pipes in the chimney (combustive air in counter current in the chimney)
or
- 4 Air/flue gas connection using concentric pipes in the boiler room and single "flex" pipes in the chimney (combustive air in counter current in the chimney)
- 5 **Classification C₅₃**: Separate air and flue gas connection using a bi-flow adapter and single pipes (combustive air taken from outside)
- 6 **Classification B_{23P}**: Connection to a chimney (combustive air taken from the boiler room).
- 7 **Classification B_{23P}**: for cascade installations
